Decision Trees

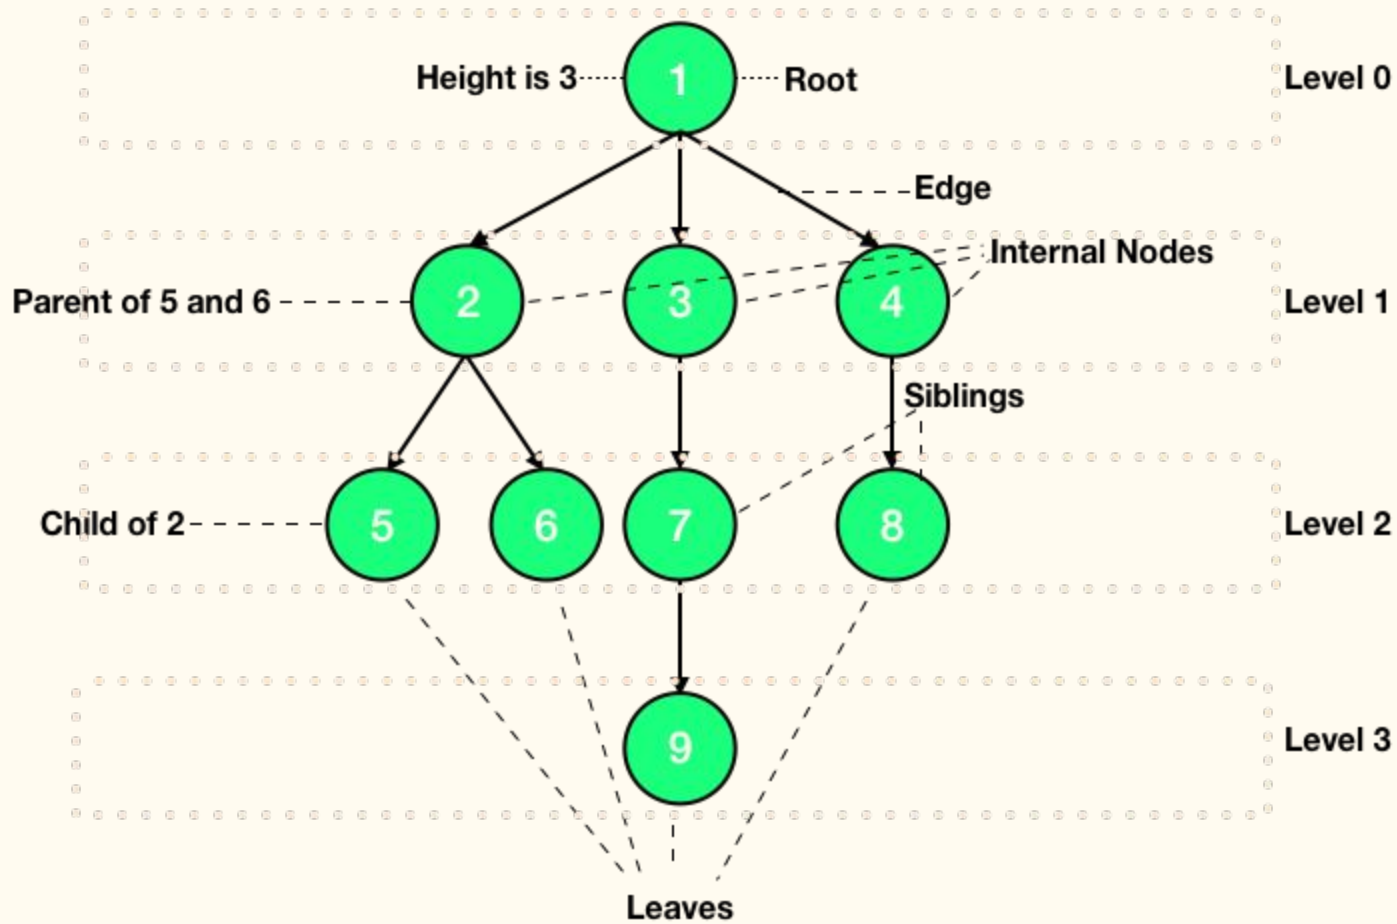

COGNIBOT
AI meets Industry

- Can be used for classification (most common use) or regression problems
- Is human interpretable
- Pick an attribute, do a simple test
- Conditioned on a choice, pick another attribute, do another test
- In the leaves, assign a class with majority vote
- Do other branches as well

Test example

- Classification tree:
 - Discrete output
 - leaf value y_m typically set to the most common value in $\{t_{(m_1)}, \dots, t_{(m_k)}\}$
- Regression tree:
 - Continuous output
 - leaf value y_m typically set to the mean of values in $\{t_{(m_1)}, \dots, t_{(m_k)}\}$

Function Approximation

- Problem:
 - Set of possible instances X
 - Set of possible labels Y
 - Unknown target function $f: X \rightarrow Y$
- Input: Training examples of unknown target function

$$\{\langle \mathbf{x}_i, y_i \rangle\}_{i=1}^n = \{\langle \mathbf{x}_1, y_1 \rangle, \dots, \langle \mathbf{x}_n, y_n \rangle\}$$

- Output: The best approximation of f
