

# Environment

---

Jupyter Notebooks, Linux commands, GPU Computing

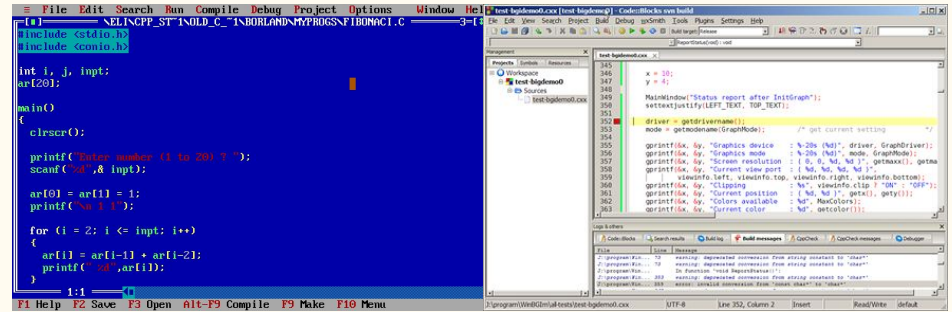

**COGNIBOT**  
*AI meets Industry*

# What is a programming environment?

- Hardware and software used by a programmer

# Software Examples

1. TurboC++ (Outdated)
2. Visual Studio
3. RStudio
4. Jupyter Notebook
5. Sublime Text

```
In [0]: def display_old_new(img, dst, descp='Default Descp'):  
        ...  
        Display two images side-by-side for comparision  
  
        Params:  
        @img - numpy array - 1 channel, Image 1  
        @dst - numpy array - 1 channel, Image 2  
        @descp - str, Description of Image 2  
        ...  
  
        plt.subplot(121),plt.imshow(img, cmap='gray'),plt.title('Original')  
        plt.xticks([]), plt.yticks([])  
        plt.subplot(122),plt.imshow(dst, cmap='gray'),plt.title(descp)  
        plt.xticks([]), plt.yticks([])  
        plt.show()
```

## Using OpenCV

### Image convolution

```
In [3]: FILE_LOCATION = './lena_gray.png'  
  
img = cv2.imread(FILE_LOCATION, 0)  
  
kernel = np.array([[ -2,-1,0],  
                  [-1,1,1],  
                  [0,1,2]])  
  
%time dst = cv2.filter2D(img,-1,kernel)  
  
display_old_new(img, dst, 'Emboss')
```

CPU times: user 239 µs, sys: 1.05 ms, total: 1.29 ms

# Jupyter Notebooks

# Python and R environment

- Scripting languages
- Interpreted vs. Compiled
- Can be broken down into parts and executed separately

# Python Kernel

NVIDIA A100 Tensor Core TF32 with Sparsity

# GPU Computing

**COGNIBOT**  
*AI meets Industry*

# What is a GPU?

- graphics processing unit
- Supports matrix operations
- Speeds up parallel computation

$$\begin{matrix} & \begin{matrix} 1 & 2 & \dots & n \end{matrix} \\ \begin{matrix} 1 \\ 2 \\ 3 \\ \vdots \\ m \end{matrix} & \left[ \begin{array}{cccc} a_{11} & a_{12} & \dots & a_{1n} \\ a_{21} & a_{22} & \dots & a_{2n} \\ a_{31} & a_{32} & \dots & a_{3n} \\ \vdots & \vdots & \vdots & \vdots \\ a_{m1} & a_{m2} & \dots & a_{mn} \end{array} \right] \end{matrix}$$
